

# Product Data Sheet

Range:

Title: 6mm Linear Resonant Actuator

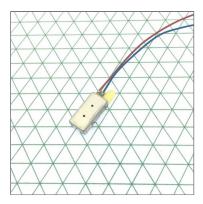

Type: Undefined

Model: C12-003

6mm Linear Resonant Actuator

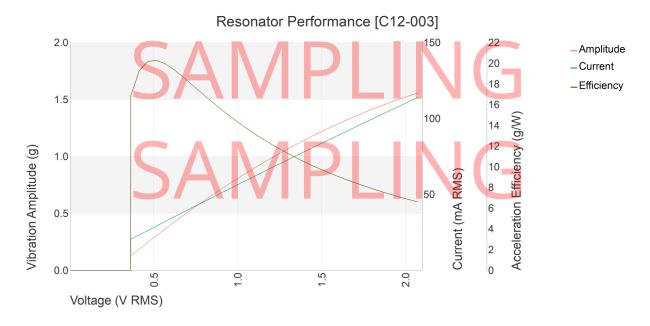

12mm Type

Shown on 6mm Isometric Grid

KEY FEATURES	
Body Diameter	6 mm [+/- 0.2]
Body Length	12 mm [+/- 0.2]
Rated Voltage (RMS)	2 V
Rated Resonant Frequency	204 Hz [+/- 10]
Typical Rated Operating Current	111 mA
Typical Norm. Amplitude	1.5 G

### TYPICAL DC MOTOR PERFORMANCE CHARACTERISTICS

## **ORDERING INFORMATION**

The model number fully defines the model, variant and additional features of the product. Please quote this number when ordering. For stocked types, testing and evaluation samples can be ordered directly through our online store.

# Looking for the perfect design? We can help.

Precision Microdrives is an ISO 9001:2015 trusted designer and manufacturer of miniature, cost-effective, and well engineered motors and mechanisms. We are specialists in,

- Trusted precision motor design
- Flexible motor & mechanism manufacturing
- Dependable quality control & after-sales support
- Industry leading motor testing and validation

Our UK based motor design engineers, will support you through the complex process of specifying, developing, validating, and mass manufacturing, a custom motor or mechanism. The result? A part perfect for your application.

Delivered, On-Time & To Spec.

### **DESIGN FOR APPLICATION CASE STUDIES**

# ENCAPSULATED VIBRATION MOTOR FOR A CPR TRAINING DUMMY

- Low volume, high value manufacturing
- Custom CNC machined enclosure
- Optimised haptic performance
- Custom PCB including EMI filters
- Part no. 334-401.001

# VIBRATION MOTOR HIGHLY OPTIMISED FOR RUGGEDISED FIRE AND POLICE EMERGENCY RADIOS

- High volume production
- Optimised for emergency services application
- Ruggedised design with custom rubber 'suspension' cover
- Custom PCB with spring legs for simplified production assembly times
- Part no. 308-104.001

# PRECISION SPEED AND TORQUE CONTROLLED SERVO WITH INTEGRATED TUNABLE PID LOOP FOR SINGLE-USE SCIENTIFIC INSTRUMENT.

- Medium volume, high value assembly
- Proprietary PID controller converts cost-effective motor design into a precision servo
- Adapted control software including digital IO (to customer's specification)
- Part no. 132-100.001

# CUSTOMISED PRECISION GEAR MOTOR WITH ROBUST OPTICAL ENCODER

- High volume production
- Application specific output shaft
- Tailored motor performance curves
- Rear motor shaft with noise resistant optical encoder
- Part no. 212-116.001

### PHYSICAL SPECIFICATION

PARAMETER	CONDITIONS	SPECIFICATION
Body Diameter	Max body diameter or max face dimension where non-circular	6 mm [+/- 0.2]
Body Length	Excl. shafts, leads and terminals	12 mm [+/- 0.2]
Unit Weight		1.5 g

### **LEADS & CONNECTORS SPECIFICATION**

PARAMETER	CONDITIONS	SPECIFICATION
Lead Length	Lead lengths defined as total length or between motor and connector	100 mm [+/- 3]
Lead Strip Length		1.5 mm [+/- 0.5]
Lead Wire Gauge		32 AWG
Lead Configuration		Straight

# **OPERATIONAL SPECIFICATION**

PARAMETER	CONDITIONS	SPECIFICATION
Rated Voltage (RMS)		2 V
Max. Rated Operating Current	At rated voltage using the inertial test load	149 mA
Max. Start Voltage	Certified starting voltage. Measured at no load, where applicable	0.5 V
Rated Resonant Frequency	At rated voltage with the inertial test load	204 Hz [+/- 10]
Rated Inertial Test Load	Mass of rated load standard test sled	100 g
Max. Operating Voltage		2.05 V
Min. Vibration Amplitude	Peak-to-peak value at rated voltage using the inertial test load	0.9 G

Important: The characteristics of the motor is the typical operating parameters of the product. The data herein offers design guidance information only and supplied batches are validated for conformity against the specifications on the previous page.

#### TYPICAL PERFORMANCE CHARACTERISTICS

PARAMETER	CONDITIONS	SPECIFICATION
Typical Rated Operating Current	At rated voltage using the inertial test load	111 mA
Typical Vibration Amplitude	Peak-to-peak value at rated voltage using the inertial test load	1.5 G
Typical Vibration Efficiency	At rated voltage using the inertial test load	6.79 G/W
Typical Norm. Amplitude	Peak-to-peak vibration amplitude normalised by the inertial test load at rated voltage	1.5 G
Typical Start Voltage	Measured at no load, where applicable	0.27 V
Typical Terminal Resistance		15.7 Ohm
Typical Terminal Inductance		64.54 uH

R001-V007 © 2021 3

# TYPICAL HAPTIC CHARACTERISTICS

PARAMETER	CONDITIONS	SPECIFICATION
Typical Lag Time	At rated voltage using the inertial test load	10 ms
Typical Rise Time	At rated voltage using the inertial test load	32 ms
Typical Stop Time	At rated voltage using the inertial test load	125 ms

### **ENVIRONMENTAL CHARACTERISTICS**

PARAMETER	CONDITIONS	SPECIFICATION
Max. Operating Temp.		70 Deg.C
Min. Operating Temp.		-20 Deg.C

#### DATASHEET REVISION AND VERSION NUMBERING

We aim to provide ou customer with the most detailed product information available. Sometimes changes are necessary, and these will be controlled by our engineering change request and notification process. To track datasheet versions we use both a 'production revision number' and a 'document version number'. These can be found at the bottom of every page. Inc some cases, such as documentation errors, the document version number can increase without triggering a product revision.

### LIFE SUPPORT AND MISSION CRITICAL APPLICATION POLICY

PRECISION MICRODRIVES PRODUCTS ARE NOT AUTHORISED FOR USE AS CRITICAL COMPONENTS IN LIFE SUPPORT DEVICES OR OTHER CRITICAL APPLICATION SYSTEMS WITHOUT THE EXPRESS WRITTEN APPROVAL OF PRECISION MICRODRIVES LIMITED.

#### As used herein:

- 1. Life support devices or systems are devices or systems which,
  - 1.1. are intended for surgical implant into the body, or
  - 1.2. support or sustain life, and whose failure to perform when properly used in accordance with instructions for use provided in the labeling, can be reasonably expected to result in a significant injury to the user or a third party.
- 2. A critical component is any component of a life support device or any other system or machine whose failure to perform can be reasonably expected to cause the failure of the life support device or system, or to affect its safety or effectiveness.

### BATCH NUMBERING, MANUFACTURING, TRACEABILITY AND LABELLING

Every part of manufactured by Precision Microdrives is at minimum identified and traced via a batch number. Where physically practical, we try to make each part with a batch number. In addition, some parts carry a lot code or barcode serial numbers. If traceability is a core requirement for your purchase, let us know and we'll outline the production options for you.

### STANDARD QUALITY CONTROLS AND ISO 9001

Precision quality control is one of our 3 key competitive advantages. All motors that we produce undergo 100% line inspection followed by strict and detailed batch sample testing in accordance with ISO 2859. All of the processes operated at Precision Microdrives are managed within our ISO 9001 quality system.
